Jules Boeuf

Master's student learning Bio-Informatics at the University of Rennes (France)
Looking for an intership between January 2027 and August 2027

PERSONAL INFORMATION

Portfolio

Rennes, 35700
16B Boulevard Alexis Carrel
FRANCE

BOEUF Jules
03/02/2004 (22 Years-old)

SKILLS AND COMPETENCES

Native language :
- French

Other languages :
- English (CLES B2)
- German (A2)

Omics :
- Genome Browsers (Ensembl, UCSC, NCBI)
- Sequence alignment (MMseqs2, BLAST)
- RNA-Seq, CHIP-Seq, ATAC-Seq

Database management :
- Oracle, EasyPhp, LoopingMCD, Excel, Talend, MongoDB , ChromaDB
- VBA, SQL , PyMongo (NoSQL)

Computing :
- Word, PowerPoint, Excel

Web :
- HTML, CSS, PHP, JavaScript, NodeRed

Data Analysis :
- Sphinx, Power BI, Spyder, RStudio, Tableau, Qliksense
- Python, SAS, R, Scala, Bash

Statistics :
- Inferential, descriptive, linear regression
- Machine learning (classification, regression)
- Neural Networks

EDUCATION

2025 / In progress - **Master Bio-Informatique / Bio-Informatic (Master's Degree), Rennes (FRANCE)**

- Statistics, Machine Learning
- Programmation, Genomics analysis tools
- Biology, Omics data analysis

Address : Université de Rennes, Campus Baulieau, Faculté des Sciences, 263 avenue du Général Leclerc, 35042 Rennes (FRANCE)

2022 / 2025 - **BUT Science des données / Data Science (Level 3, vocational degree), Niort (FRANCE)**

- Statistics, mathematics, probabilities
- Computing, statistical programmation
- Communication, accounting

Address : Pôle Universitaire de Niort, Département Science des Données, 8 rue Archimède, 79000 Niort (FRANCE)

2019 / 2022 - **Baccalauréat / Baccalaureate (A levels),Poitiers (FRANCE)**

Awarded with high honours (2.1)
Specialities : Economic and Social Sciences, History-geography and geopolitics (+ additional mathematics option)
Address : Lycée du Bois d'Amour, 9 rue de la Garenne, 86034 Poitiers (FRANCE)

EXPERIENCE

ACADEMIC PROJECTS

Simulating DNA Repair (February 2026) :

Recreating how PARP1 proteins gather in damaged DNA areas, using both stochastic and deterministic mathematical methods

- Image data processing and correction *(with Fiji)*
- *Creation and optimization of a model based on experimental data (with Python)*
- *Visualization and comparison of simulation results (with Python)*

Analysis of the seismic activity of the volcano Fani Maorè (February 2025):

Modelisation and analysis of seismic events to predict the activity of a volcano and its spatial evolution

- *Scrapping data from a website and checking its quality (with R)*
- *Using Time Series to predict a phenomenon (with R)*
- *Using Clustering methods to detect special areas (with R)*

Building and training a Neural Network (January 2025) :

Creation of an image classification system using various training methods with convolutional neural networks

- Creating and tuning a Neural Network (with Python)
- *Data processing and cleaning (with Python)*
- *Using statistical metrics to check the quality of the predictions (with Python)*

INTERESTS

Cultural activities :

- Movies
- Reading (novel, comic books)
- Piano (self-taught since 3 years)
- Guitar (self-taught since 1 year)

Sport activities :

- Basketball (2 years in club, then 2 years in university sport)
- Padel (recreational sport since 5 months)

SITE WORK

Intern at INRAE's PGBA research unit (April - May 2026) :

Optimizing and adding new features to Genofig, a software for the comparison of bacterial genomic regions

- *Processing alignment data (with Python, data from BLAST and MMSeqs2)*
- *Testing and benchmarking various Multi-Threading methods (with Python)*
- *Visualization of the polymorphic positions between two DNA sequences (with Python and SVG)*

Address : Unité Infectiologie et Santé Publique, UMR 1282 INRAE, Centre INRAE Val de Loire, Secteur 2 - Point De Livraison 6, 37380 Nouzilly (FRANCE)
Type of business : Research center specializing in bacterial organisms

Intern, then employee, at INRAE's URP3F research unit (February- August 2025) :

Statistical analysis of plant growth simulations under "typical meteorological year" conditions

- *Bibliographic research and learning to use a plant model (with Python)*
- *Using a Data Center to accelerate a process (with Bash)*
- *Modelisation and visualisation of plant growth under various meteorological conditions (with Python and R)*

Address : INRAE, Le Chêne - RD 150, CS 80006, 86600 Lusignan (FRANCE)
Type of business : Research center specialized in agriculture and environment

Intern, then employee, at INRAE's URP3F research unit (April - August 2024) :

Research and testing of statistical methods to build a typical meteorological year from 15 years of data, in order to estimate solar radiation

- *Bibliographic research and analysis of meteorological data (with Python)*
- *Testing and recreating statistical methods (with Python)*
- *Creation of a dynamical user interface connected to a server (with NodeRed)*

Address : INRAE, Le Chêne - RD 150, CS 80006, 86600 Lusignan (FRANCE)
Type of business : Research center specializing in agriculture and the environment
